But that doesn't happen overnight! There are special training procedures—over and above basic training—that turn a swabbie into a SEAL, a grunt into a Green Beret, or a runt into a Ranger. It was a simple announcement on a summer day. It appeared to be a straightforward proposal to solve a serious problem. Constrained by a statutory requirement for self-funding and facing a new paradigm in information dissemination, the National Technical Information Service (NTIS) was failing. As federal agencies distributed reports at no cost on the World Wide Web-- reports that formerly NTIS had distributed--NTIS was unable to collect revenue sufficient to cover its costs of cataloging and maintaining its collection. The proposal put forth in August 1999 by the Department of Commerce (where NTIS is organizationally located) was to close NTIS and move its collections and functions to the Library of Congress. The National Commission on Libraries and Information Science (NCLIS) immediately recognized this proposal to be far more significant than it first appeared. Fundamental

issues regarding how the government used, disseminated and valued its information resources were at stake. The Commission stepped forward and prepared a preliminary assessment of the proposed closure of NTIS, which it delivered to the President and Congress. This report recommended a number of steps to keep NTIS operational, but it also stated that a much broader assessment of the underlying issues involved in public information dissemination throughout government was needed. This bestselling, full-color manual includes thoroughly updated coverage of all aspects of sports diving, including equipment, safety, and diving techniques. Current diving standards are reflected in its discussions on beach diving, computer equipment, CPR, diving accident management, and mixed-gas diving. Over 2,900 total pages ... This chapter outlines the hard work and dedication of a number of individuals who were pioneers in the development of diving technology. As with any endeavor, it is important to build on the discoveries of our predecessors and not repeat mistakes of the past. 1-1.3 Role of the U.S. Navy. The U.S. Navy is a leader in the development of modern diving and underwater operations. The general requirements of national defense and the specific requirements of underwater reconnaissance, demolition, ordnance disposal, construction, ship maintenance, search, rescue and salvage operations repeatedly give impetus to training and development. Navy diving is no longer limited to tactical combat operations, wartime salvage, and submarine sinkings. Fleet diving has become increasingly important and diversified since World War II. A major part of the diving mission is inspecting and repairing naval vessels to minimize downtime and the need for dry-docking. Other aspects of fleet diving include recovering practice and research torpedoes, installing and repairing underwater electronic arrays, underwater construction, and locating and recovering downed aircraft.
